## Hilmk

Hilmk is a groundbreaking mobile app and web-based platform dedicated to interpreting dreams. It offers the most powerful Arabic platform for dream interpretation available 24/7, eliminating the need for users to search for individual dream interpreters.

### The challenge

While Hilmk was a sizable project with many components, it presented no significant challenges. The project's scope was clear, and the client's requirements were communicated effectively. The primary need was to develop a separate RESTful API to be integrated with the website and mobile app, along with a highly SEO-optimized landing page.

We broke down the client's requirements into manageable milestones, beginning with the development of the RESTful API. This approach allowed us to thoroughly understand the business logic and scope of the project. The final delivery included:

#### **RESTful API Development:**

- Highly optimized RESTful API for the various business logic elements specified in the project's scope.
- Unit tests for major features to ensure functionality and reliability.
- Comprehensive documentation for ease of use and integration.

#### Branding and Design:

- Created a logo and branding for Hilmk.
- Designed a modern, simple, and highly optimized UX/UI for the landing page.
- Ensured the design was visually appealing and user-friendly.

#### Web App and Landing Page Development:

- Integrated the API to connect the website and landing page with the previously built RESTful API.
- Developed a highly responsive and userfriendly landing page.
- Built a user-friendly and responsive website.
- Created an admin panel for easy management and operation.

### **The Results**

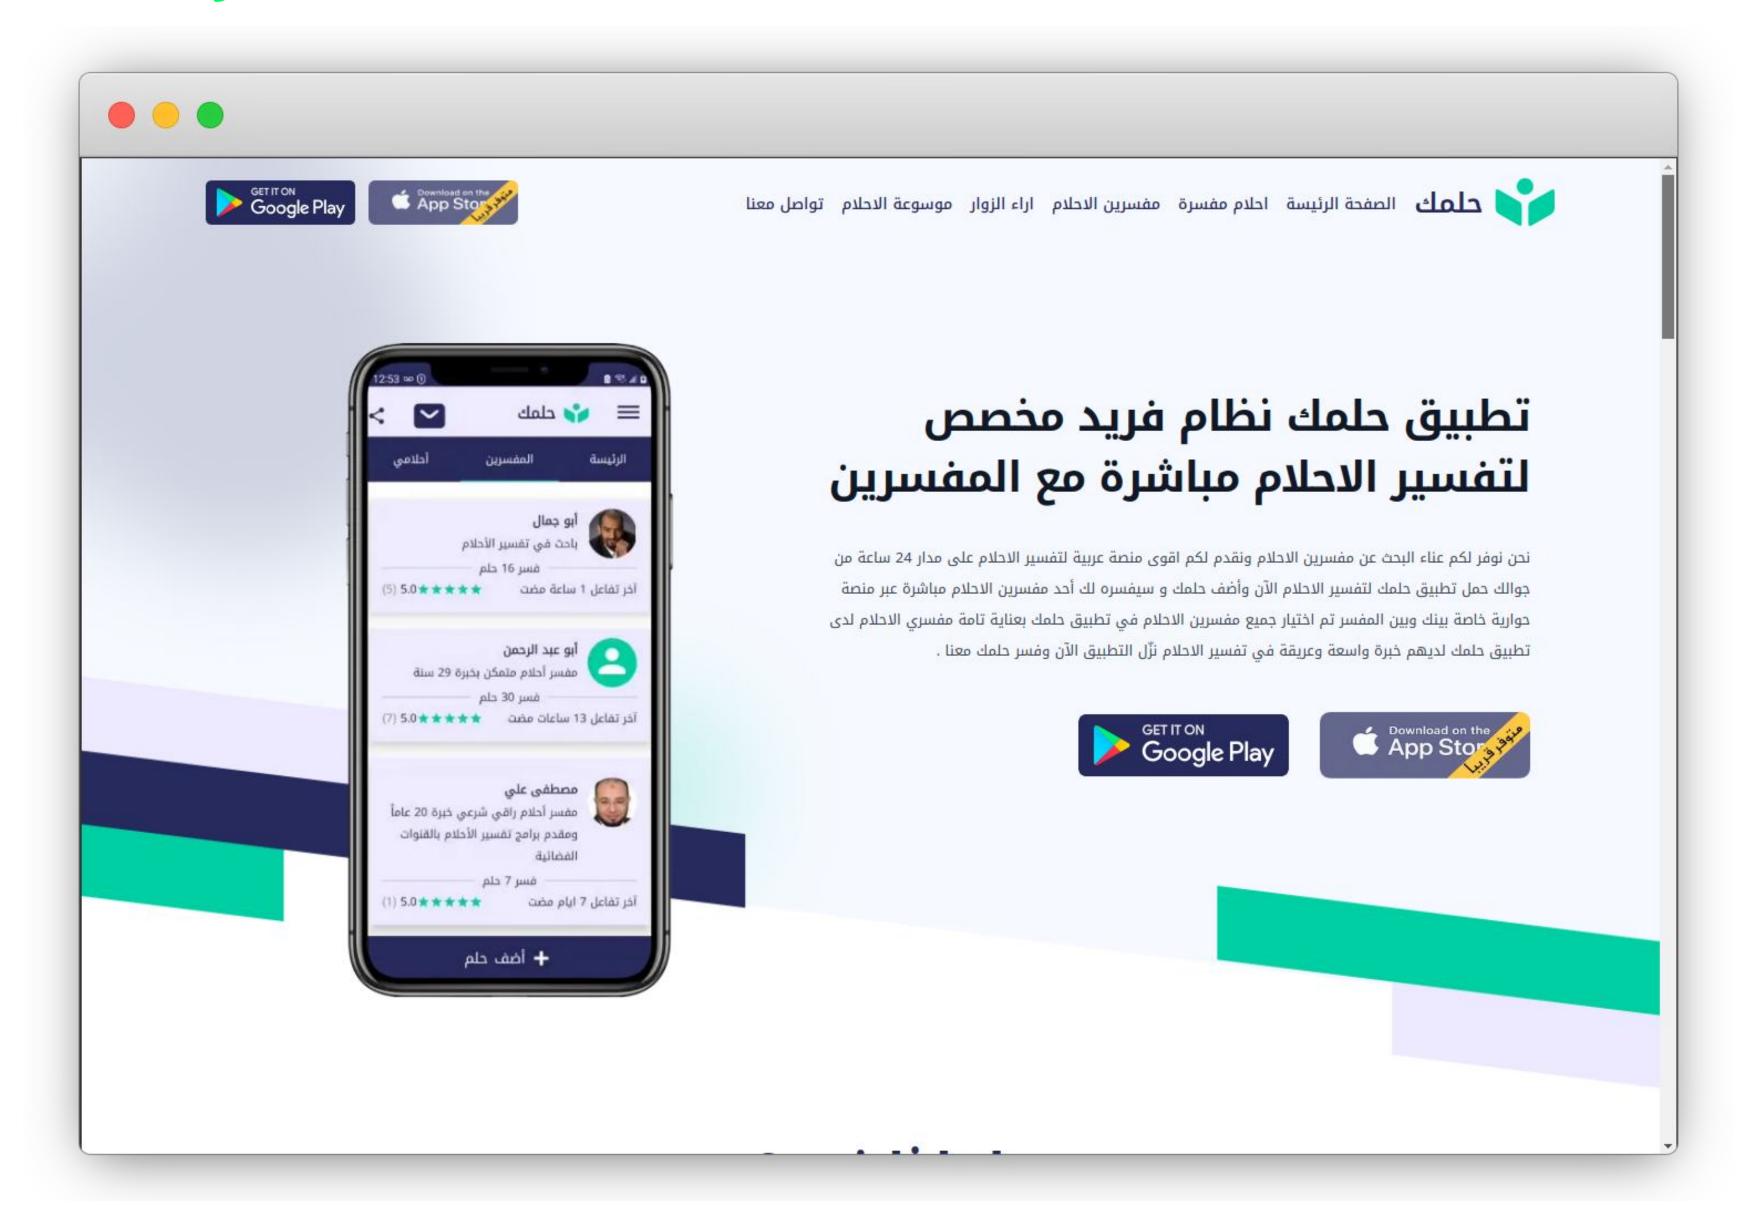

The final product included:

- A robust and well-documented RESTful API that seamlessly supports the platform's business logic.
- A modern, visually appealing, and user-friendly landing page optimized for search
- engines.
- A responsive web app that ensures a smooth user experience across all devices.
- An efficient admin panel for streamlined management.

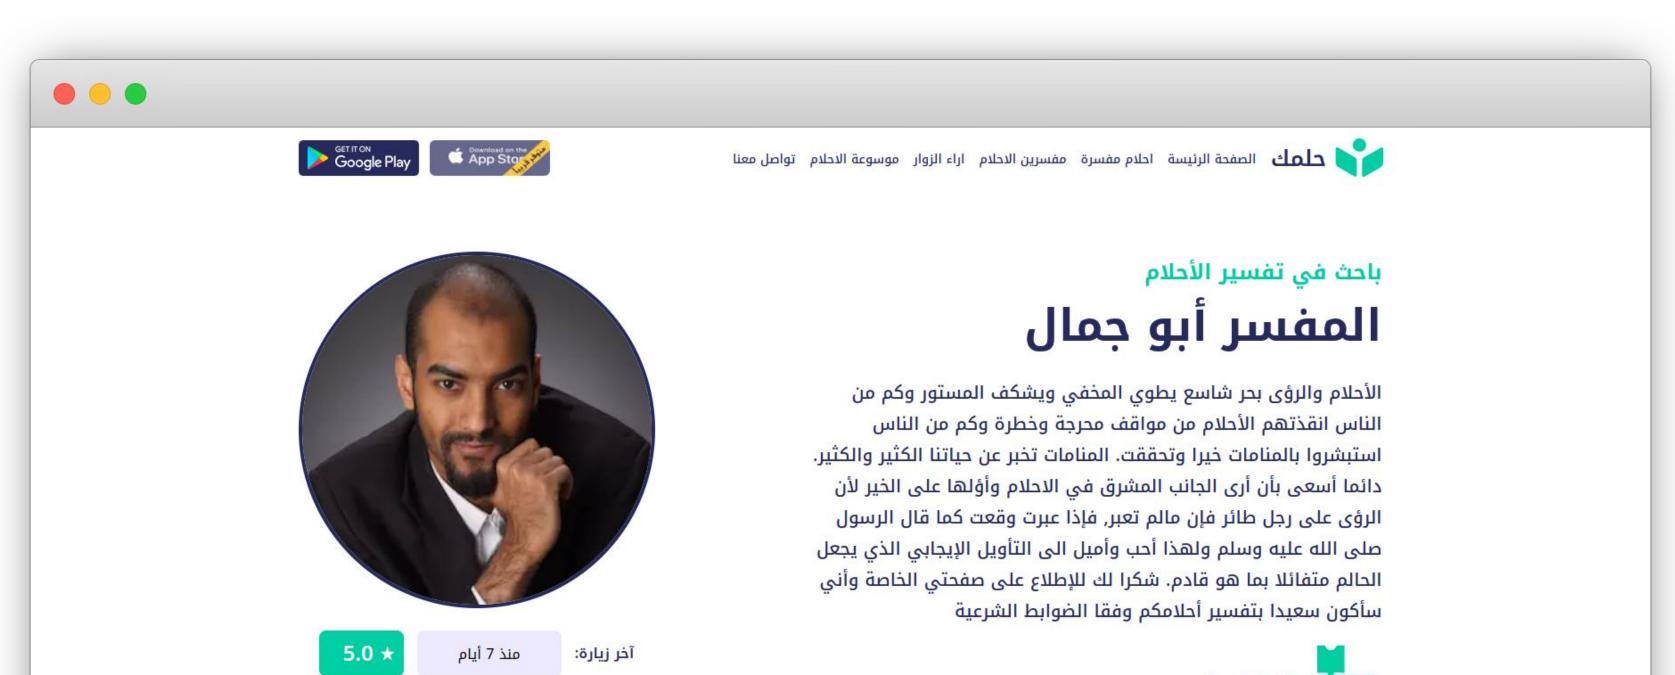

#### The testimonial

Mohamed is one of the best Django developers I have ever worked with... I have hired him lots of times for Django related work and He helped me tremendously to finish my large Django API project in reasonable time. Highly recommended
